

pxUploader

POST AND SHARE DOCUMENTS ON YOUR WEB SITE

Document Database \$2000

pxUploader equips your Web site with the ability to post and store frequently requested documents and files. Most e-mail programs can only handle 5MB or smaller files. If you are needing to send files larger than 5MB often, you need a place to store the documents for customers to download. With pxUploader you can store these documents on your Web site now. In addition, it offers anonymous file downloads or can require a login for users to access the files. This system can also be used as an intranet for employees to locate and download frequently accessed company files from the office or home.

pxUpload Includes
